Project Title

Student1, Student2

<date>

Notes

- You should use this template for your project proposal. There are a variety of slide types to draw from. **Try not to deviate from the slides or the styles.**
- The following is a suggested set of topics that you should cover in your proposal. Feel free to make your own choice on exactly how you convey your proposal but be sure to cover the main topics (objectives, research questions, data, approach etc).
- You will have 7-8 minutes to present, which probably means you will need approximately 10 slides.

Motivations & Objectives

- A bullet list of the main topic, motivations and objectives of this work.
- Keep these high-level and concise.
- Focus on why you are proposing this research and what you hope to find out as a result.
- It’s your job to explain why you think your project should be of interest to people; it doesn’t have to be interesting/relevant to everyone but you should be able to identify target people/groups.

Related Work

- Summarise any related work that you believe applies to your project.
- Has the topic been looked at before? If so by who, when, and what did they show/find.
- What are the shortcomings of previous research efforts?
- What do you hope to achieve that will make your project distinctive?

Research Questions

- Enumerate the main research questions that you wish to answer.
- These research questions should be specific and testable; avoid very vague questions.
- Ideally you should identify about 4 questions (2 per person to work on).
- It should be clear how each of the questions relate to the overall project objectives.

Datasets and Data Collection

- What data will you use to answer these questions.
- How will you collect the data? Are you relying on existing datasets or collecting your own?
- Are you combining multiple sources of data? If so, how will you accurately align them?
- How much data do you expect to get? What features will the data contain?
- Have you verified that you will be able to collect the data you need?

Sample data

- Show a sample of your data so that we know what information it contains.
- Be able to identify key aspects of the data that are important to answering your research question.
- Is your data clean or well-formed or does it need a lot of cleaning/ processing.

Approach

- Summarise how the data you will collect will enable you to address each of the research questions you have proposed?
- Try to be as precise as possible. Refer to the particular aspects of the data that you will use and how these aspects will be analysed to produce am answer to your questions.
- Are there are uncertainties in this approach?
- What will be the limitations of what you expect to find? How robust will your conclusions likely be?

Results Presentation

- What types of results will you present?
- Try to give an example (mockup) of the type of graphs/results you might expect to find.

Ethical Considerations

- Are there any ethical considerations in what you are proposing? E.g. are you using personal data?
- Are you obtaining the data in a fair way?
- Have you the right to use the data for the research you wish to do?
- Has your research the potential to be misused?

Responsibilities

- Who is responsible for what in the project? Be specific.
- At the very least it should be clear who is responsible for which aspects of data collection/cleaning and the various research questions.
